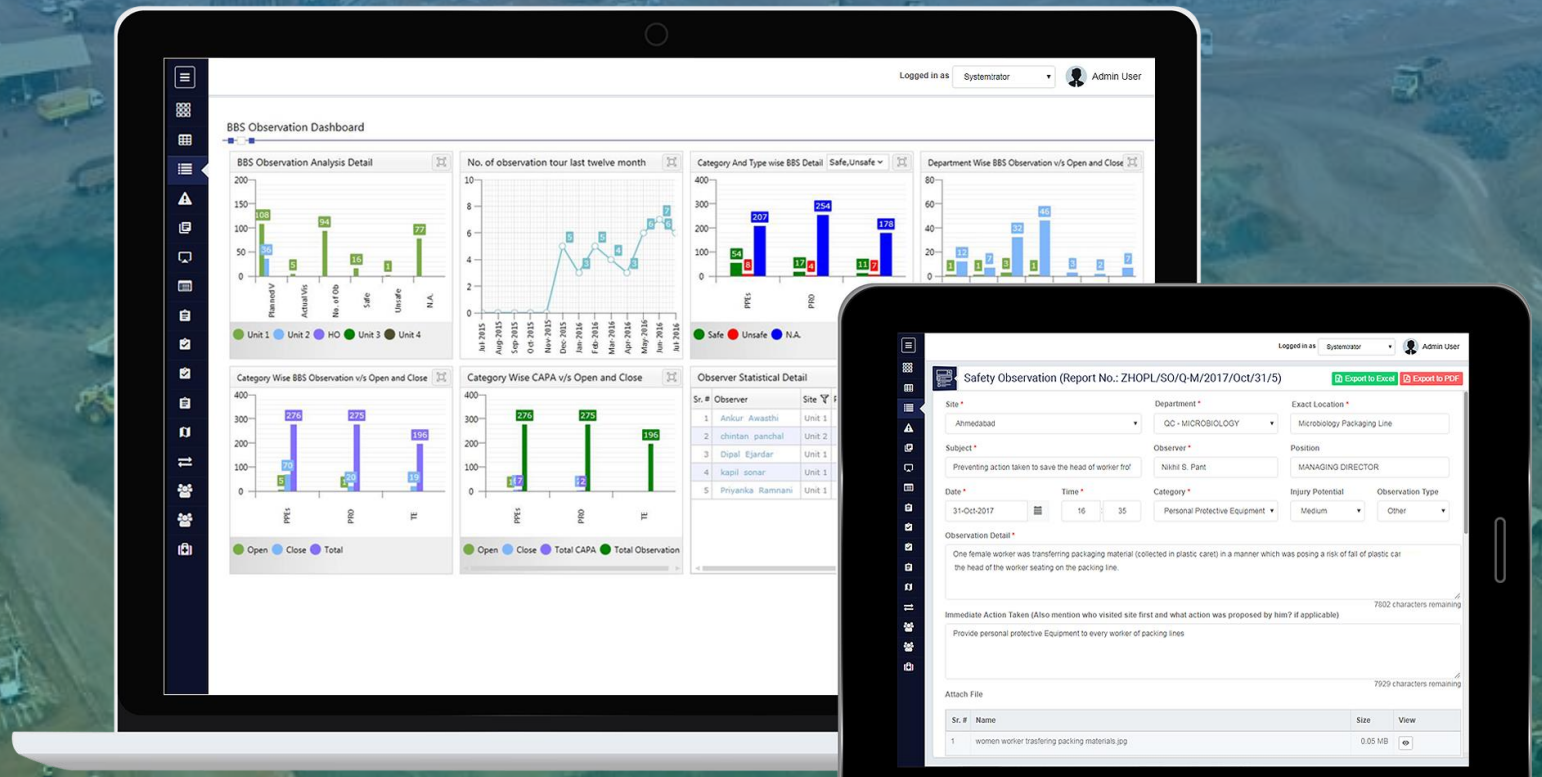
EHS Software for Mining Operations

How EHS Software Benefits Mining Operations



Safety Issues in the Mining Industry

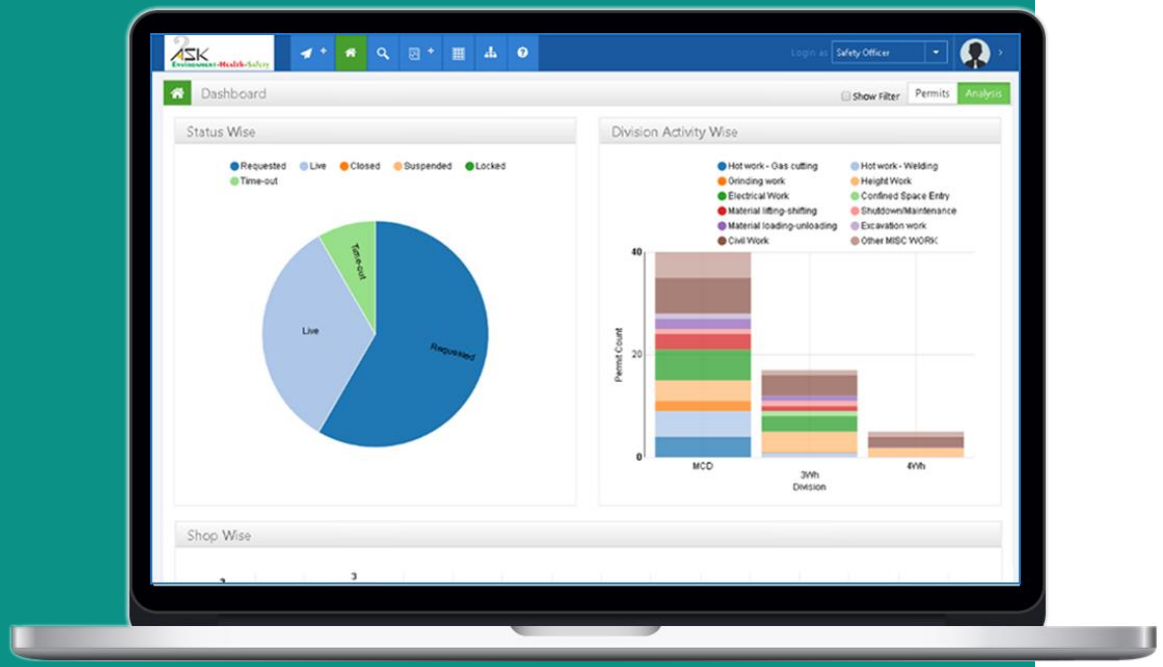
- Exposure to chemicals
- Occupational health hazards
- Heavy machinery injury
- Threat due to explosives
- Overheating or underground environment
- Access to real-time data
- Stringent regulations
- Training and custom workflows
- And more

How Will EHS Software Help?

EHS Software can make a significant difference in Mining Operations.

- It improves compliance control through enhanced operational visibility.
- It digitizes the entire process of collecting data, CAPA, generating actionable reports, etc.
- It easily tracks incidents and near misses to mitigate the risk of incidents.
- It provides access to real-time data to avoid regulatory and operational inefficiencies.
- It simplifies processes by managing multiple sites with different teams, regulations, and operations.

Features



- Manage workflows across all platforms and locations.
- Schedule and perform audits.
- Record and investigate incidents on a single platform
- Training management
- Manage contractors, vehicles, and equipment on a centralized platform
- Effortlessly document internal processes and external audits.
- 360-degree customizable to fit your organization's goals.

Ultimate & Simplified EHS Management

- EHS Management Software creates a safer and more productive workplace, which is crucial for mining operations.
- It is user-friendly, scalable, flexible, and compatible with hand-held devices.
- It gives the freedom to access and update information even in offline mode.
- It establishes accountability for the entire EHS program.

Integrate the EHS software for mining operations today for advanced and improved EHS operations!
